

Graduate ICT skill development in 4 European countries: Gender-related findings from three international surveys

Jake Murdoch & Christine Guégnard

University of Bourgogne, France

June 2023

Research questions

- Education and Youth employment within the knowledge society.
- “We define the knowledge economy as production and services based on knowledge-intensive activities that contribute to an accelerated pace of technical and scientific advance, as well as rapid obsolescence” (Powell & Snellman, 2004).
- Knowledge society is linked to significant development of new information and communication technologies (ICT) in highly competitive markets, and higher education is a key stakeholder in this development (OECD, 2019).
- To what degree are graduates’ ICT skills valued at work over years?
- Compare access to employment for women and men in 4 European countries based on the skills acquired during higher education and the first years of work.

Data

- **Cheers** (Careers after Higher Education: A European Research survey): Covering 11 European countries and Japan, 35,000 graduates from 1995 responded four years after graduation (Teichler, 2007).
- **Reflex** (Research into Employment and Professional Flexibility): In 15 countries 40,000 graduates from 2000 interviewed five years after graduation (Allen & Van der Velden, 2007).
- **Eurograduate Pilot Study**: covering around 16,000 graduates, surveyed in 2018, one and five years after graduating in eight countries (Meng et al., 2020).

Data

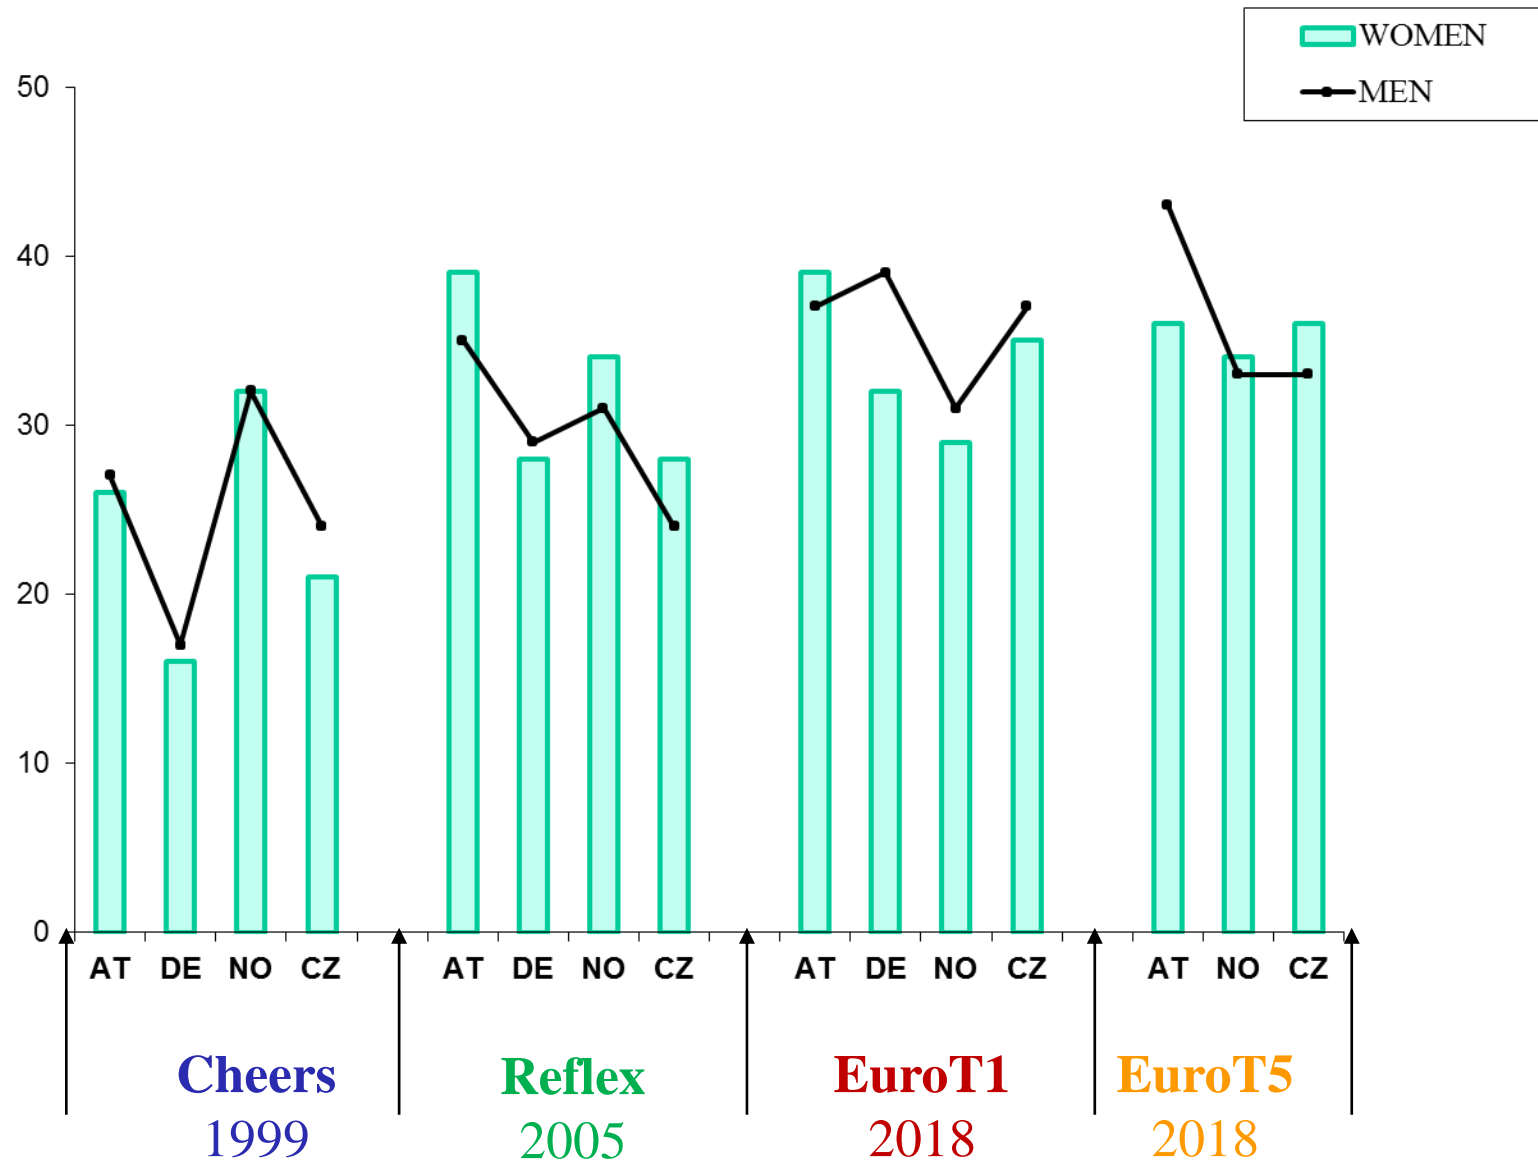

- The originality of these three surveys is that they compare the **skills acquired by students** in their studies with those **required in their jobs** using graduate self-assessment.
- The paper looks over time at skill development in the countries common to the three surveys: **Austria, Czech Republic, Germany, Norway**

Context

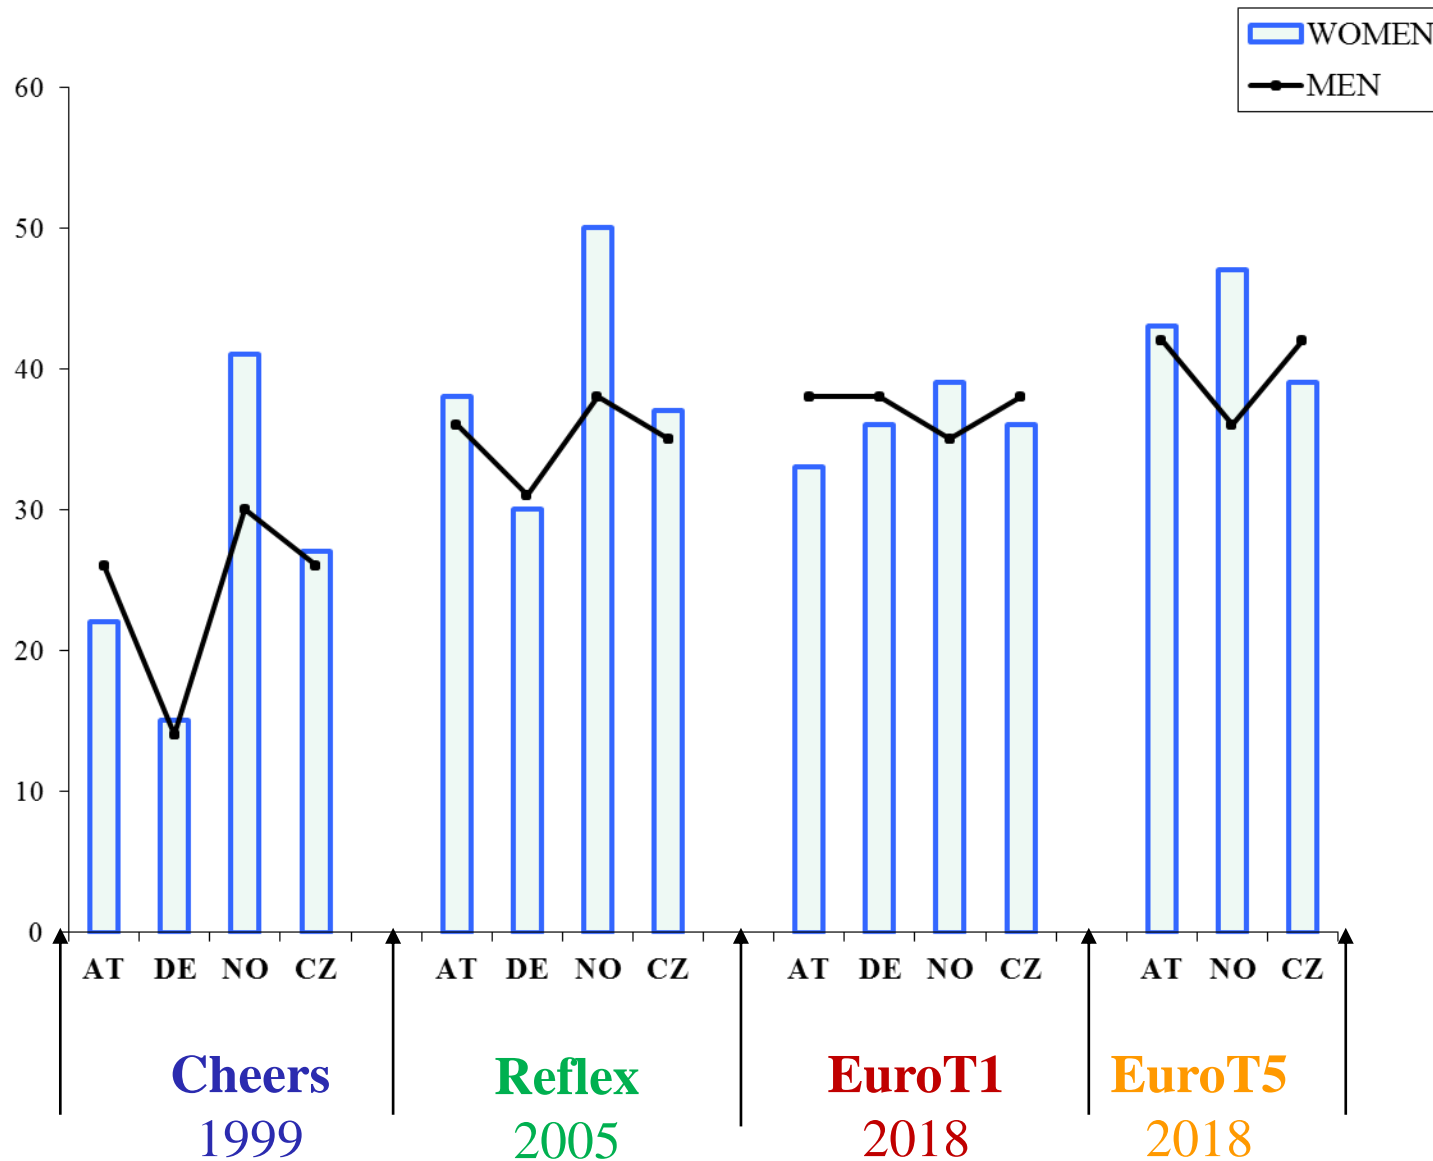

- In 2020, **52% of 25-34 year-old women** held a tertiary degree compared to **39% of men** on average across OECD countries.
- Science, Technology, Engineering and Mathematics (STEM): the predominant field of study for male graduates.

OECD indicators 2020 in %	AT	DE	NO	CZ	OECD
Tertiary education (25-34)					
Women	46	37	60	40	52
Men	37	33	42	26	39
STEM (tertiary graduates field)					
Women	16	19	10	16	13
Men	50	54	36	42	39
Unemployment rate (25-34 tertiary graduates)					
Women	4	3	3	3	7
Men	3	4	5	2	6

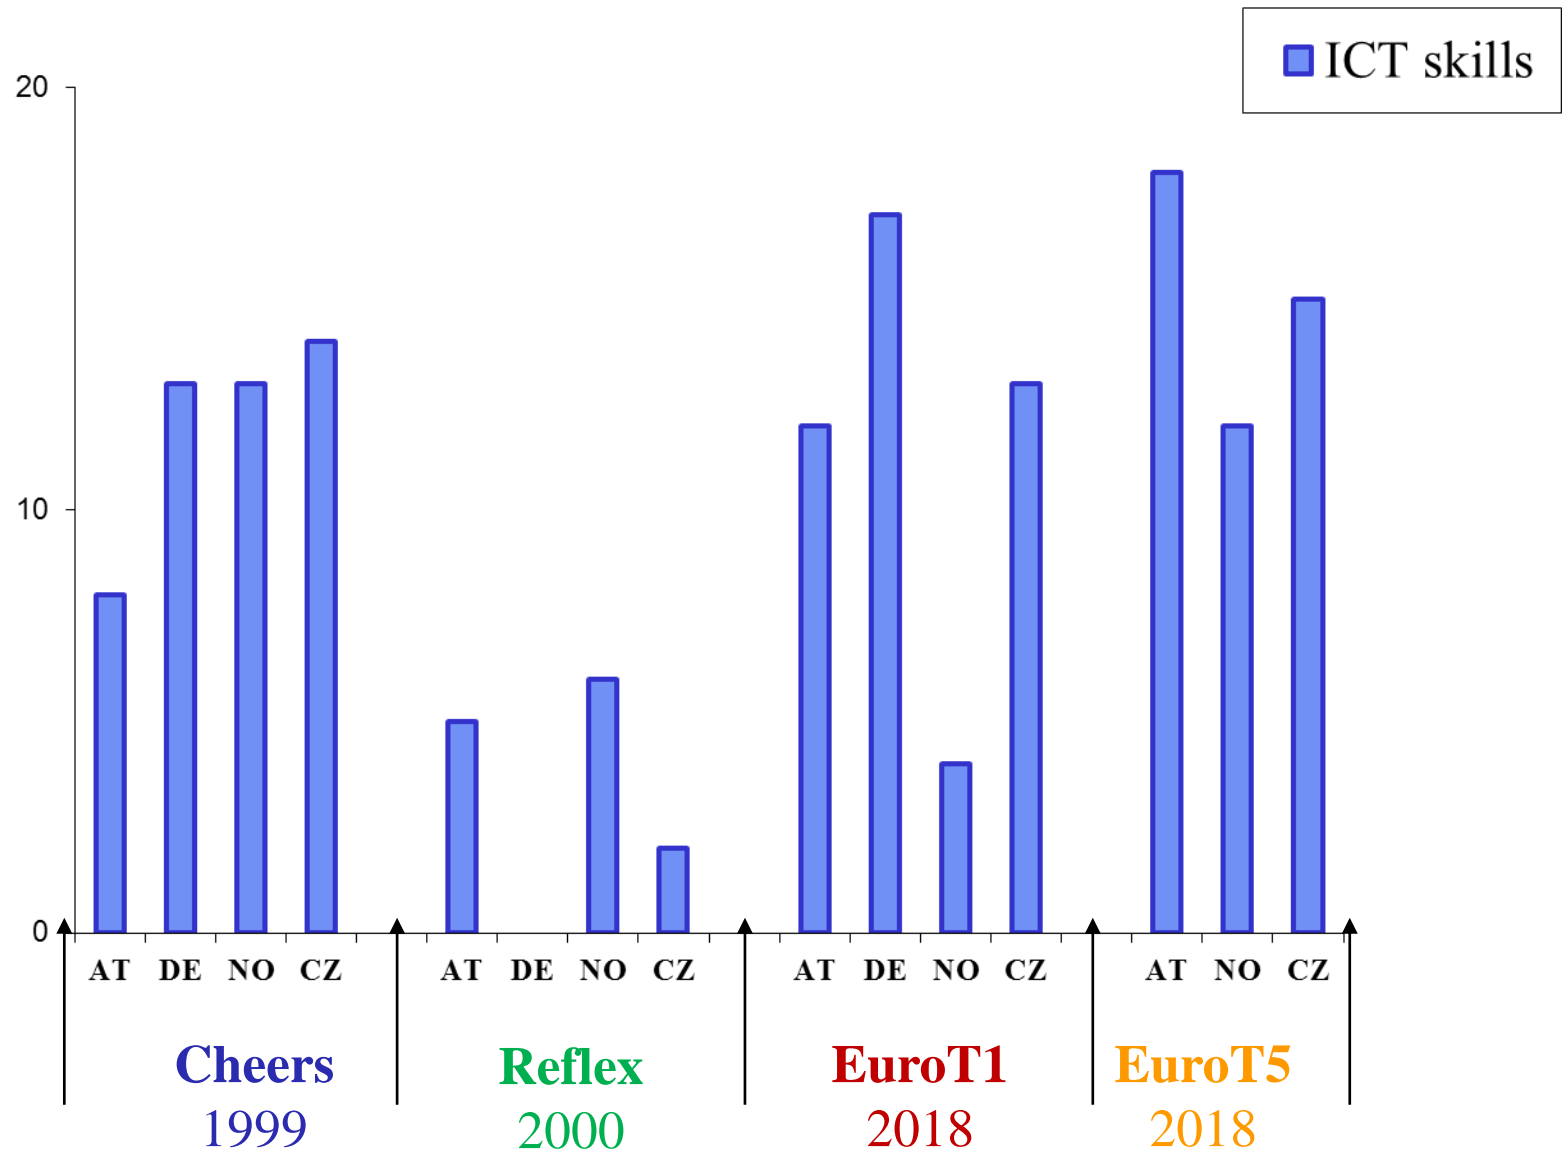

Analysis: job satisfaction (very satisfied)

Analysis: knowledge and skills used at work

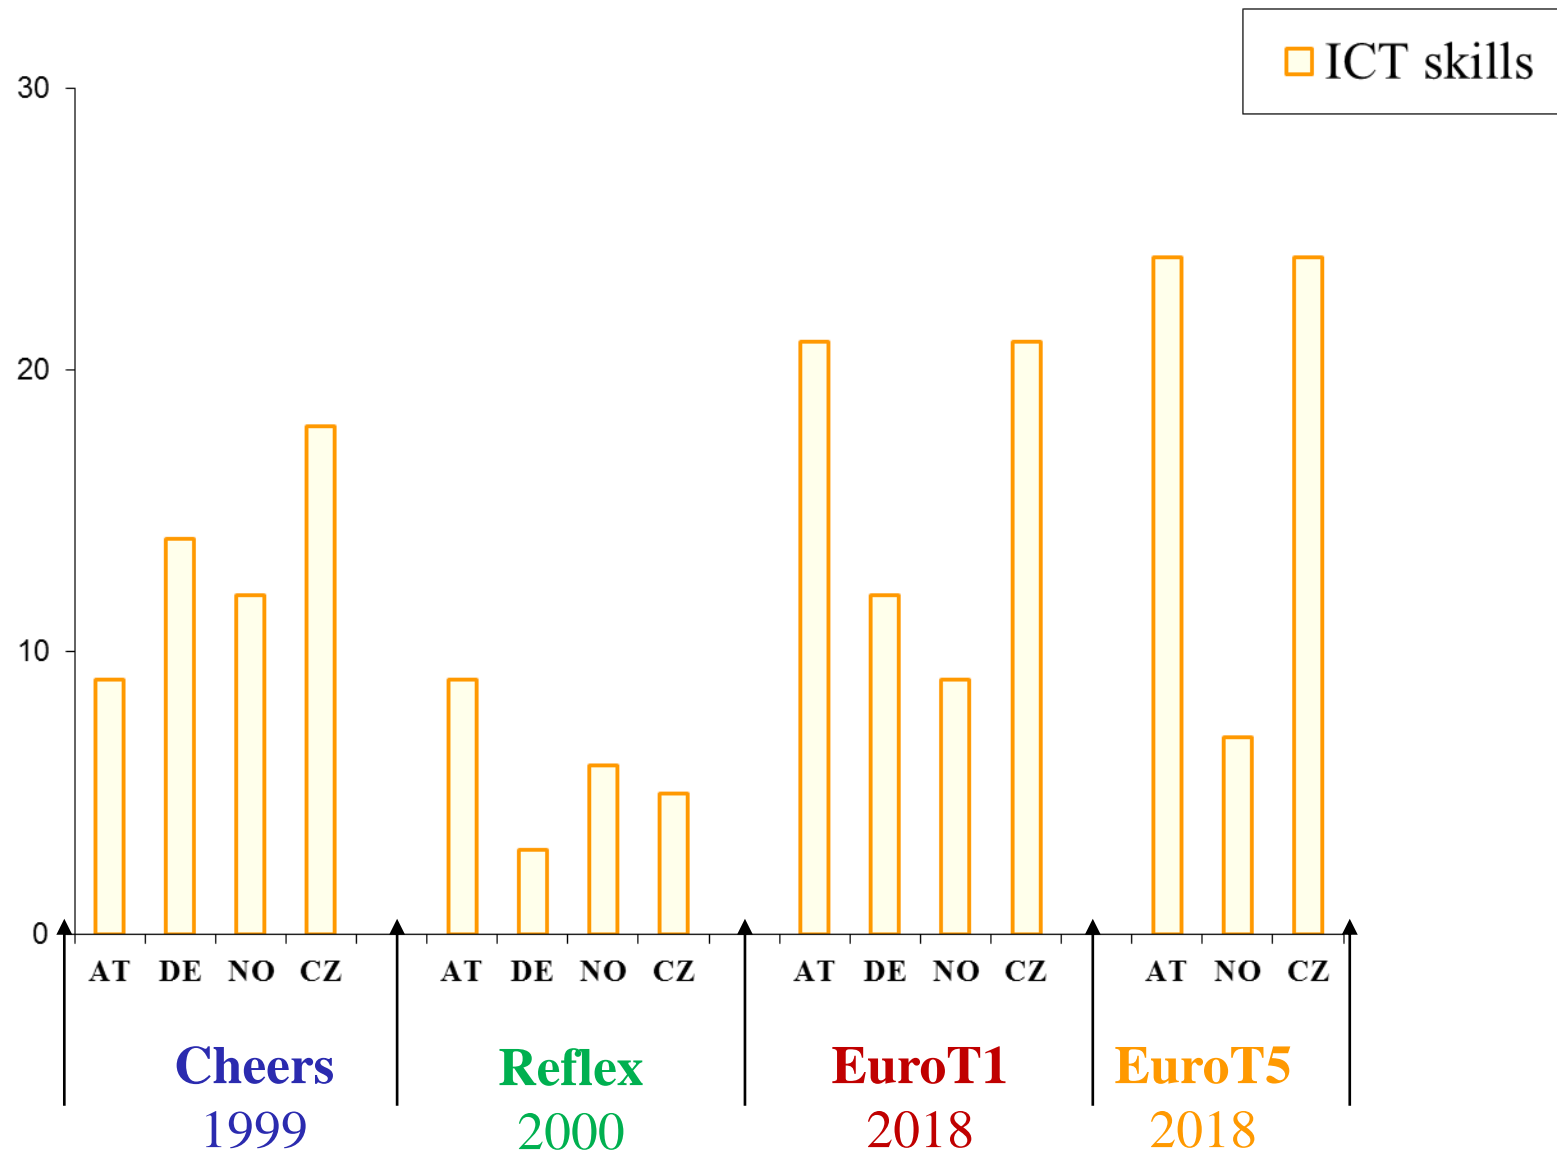

Analysis: Gender gap for required ICT skills

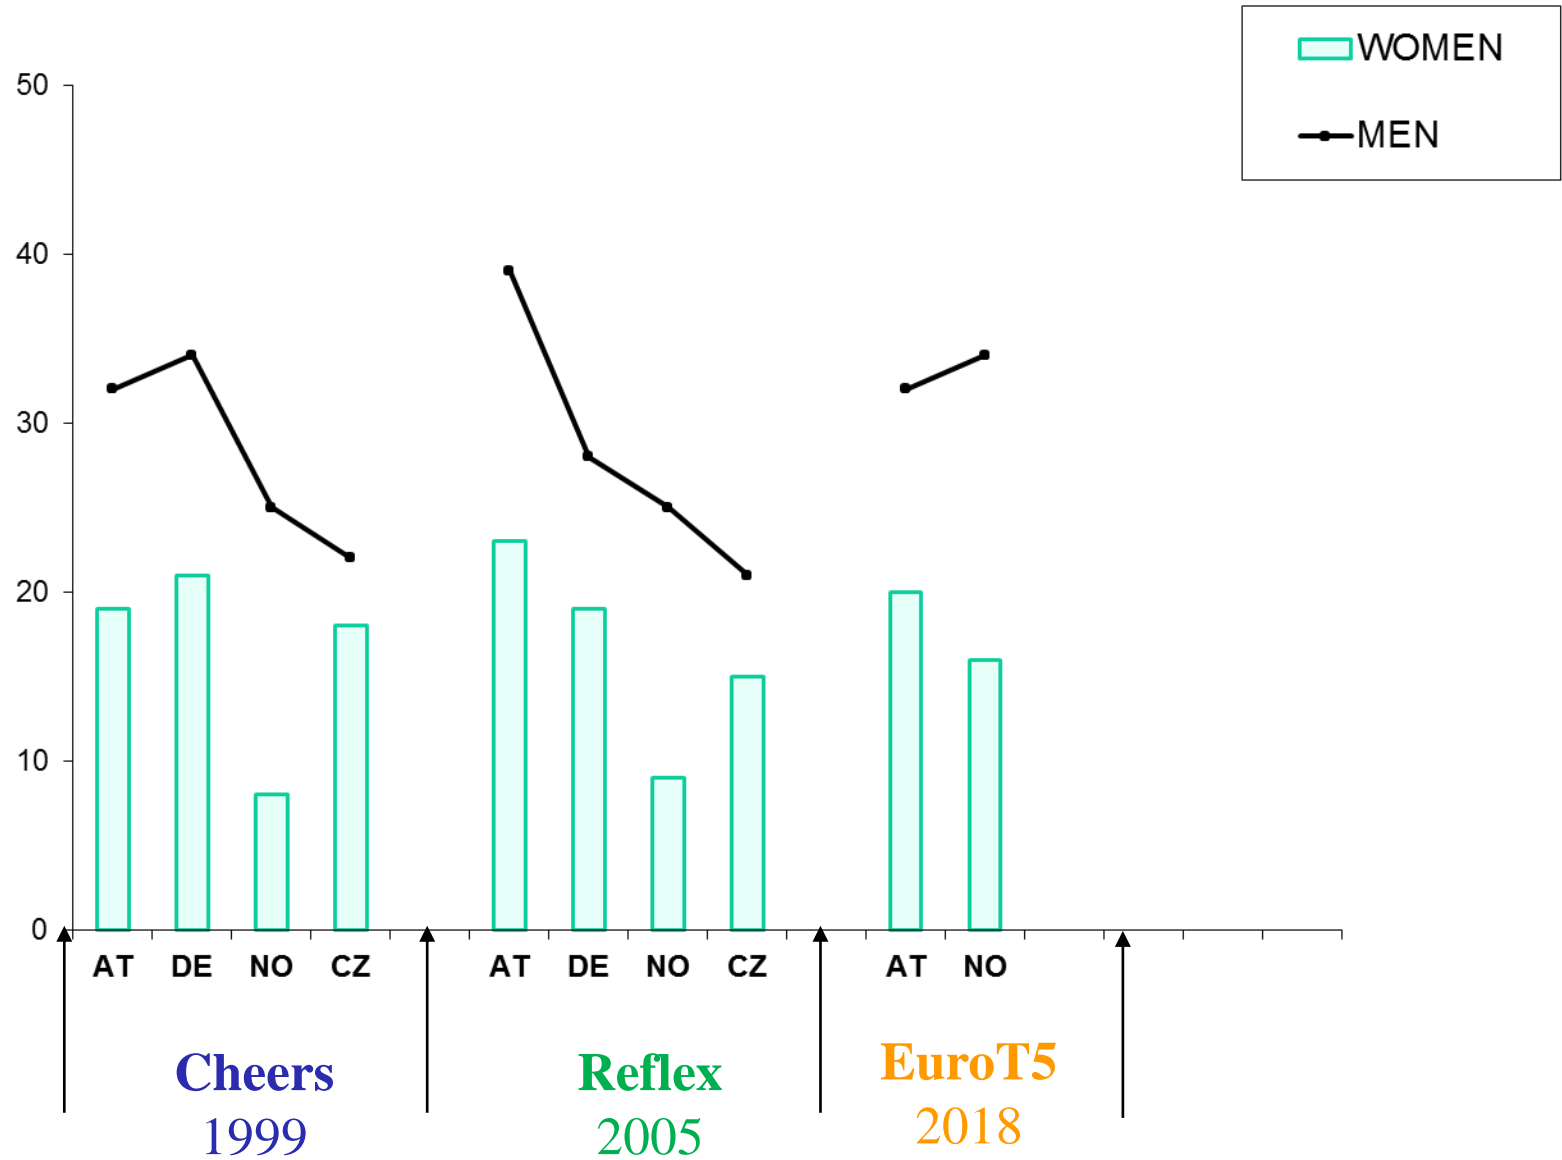

Job Analysis: professionals

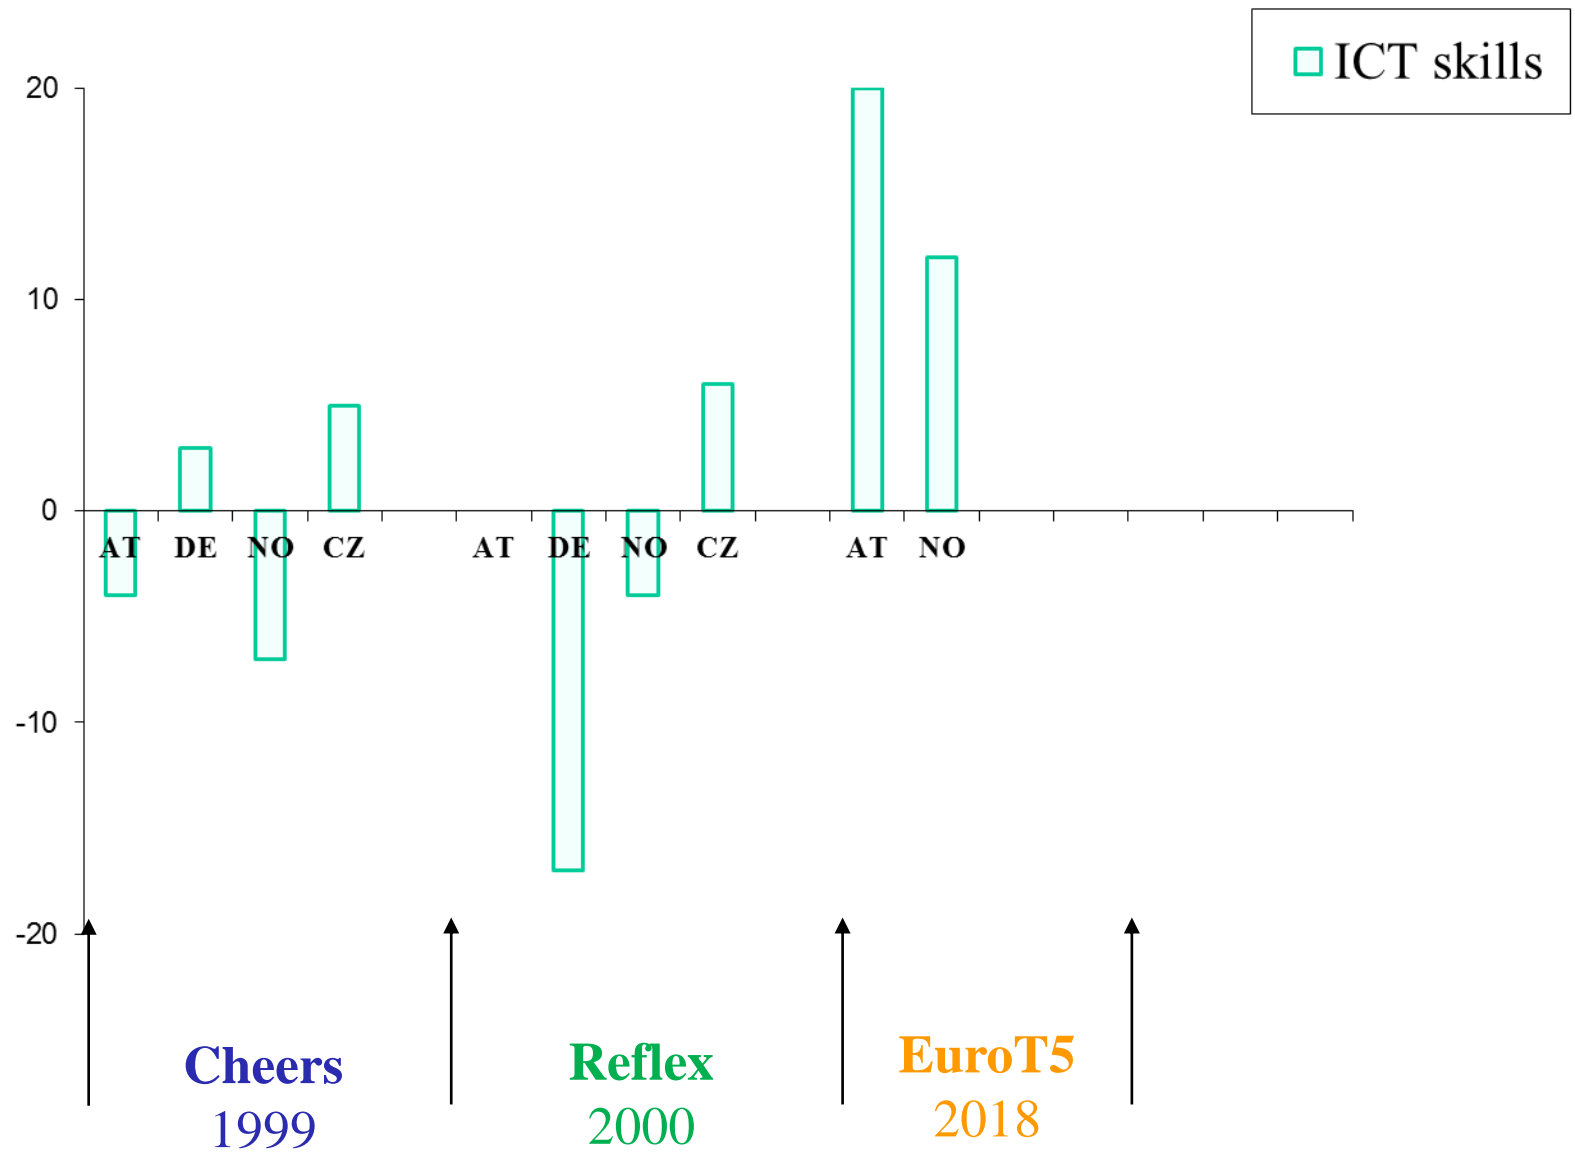

Professionals: Gender gap for required ICT skills

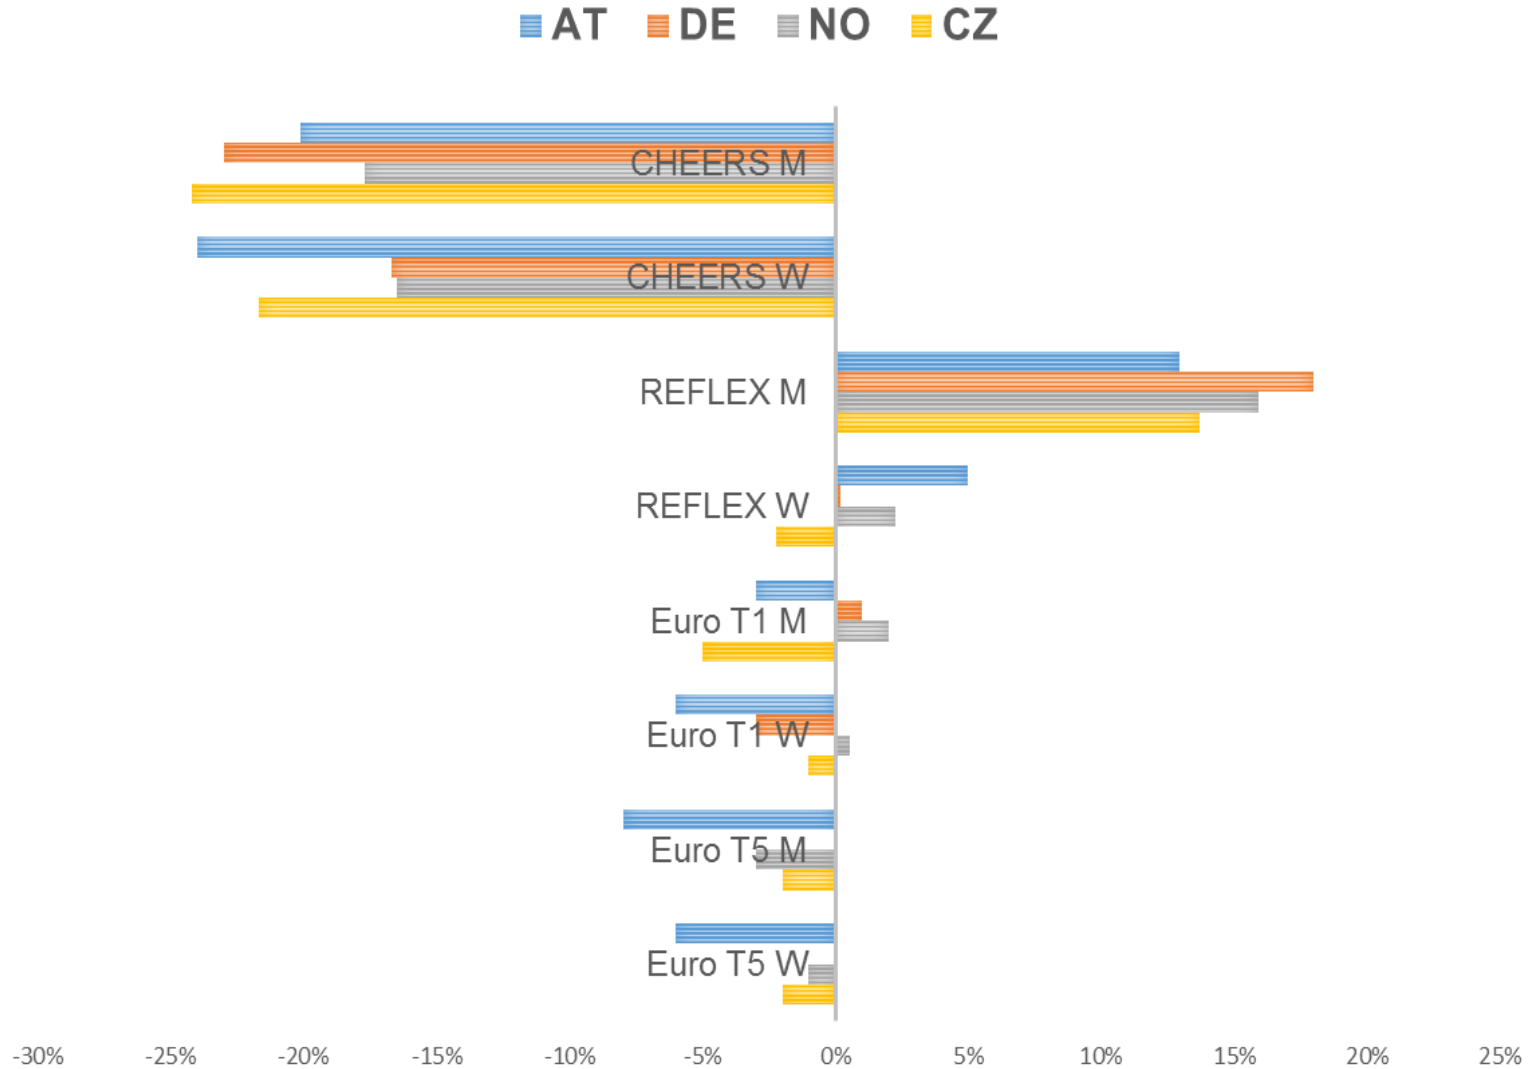

Sector Analysis: Business

Business sector: Gender gap for required ICT skills

Analysis: ICT skills mismatch

Professionals: ICT skills mismatch

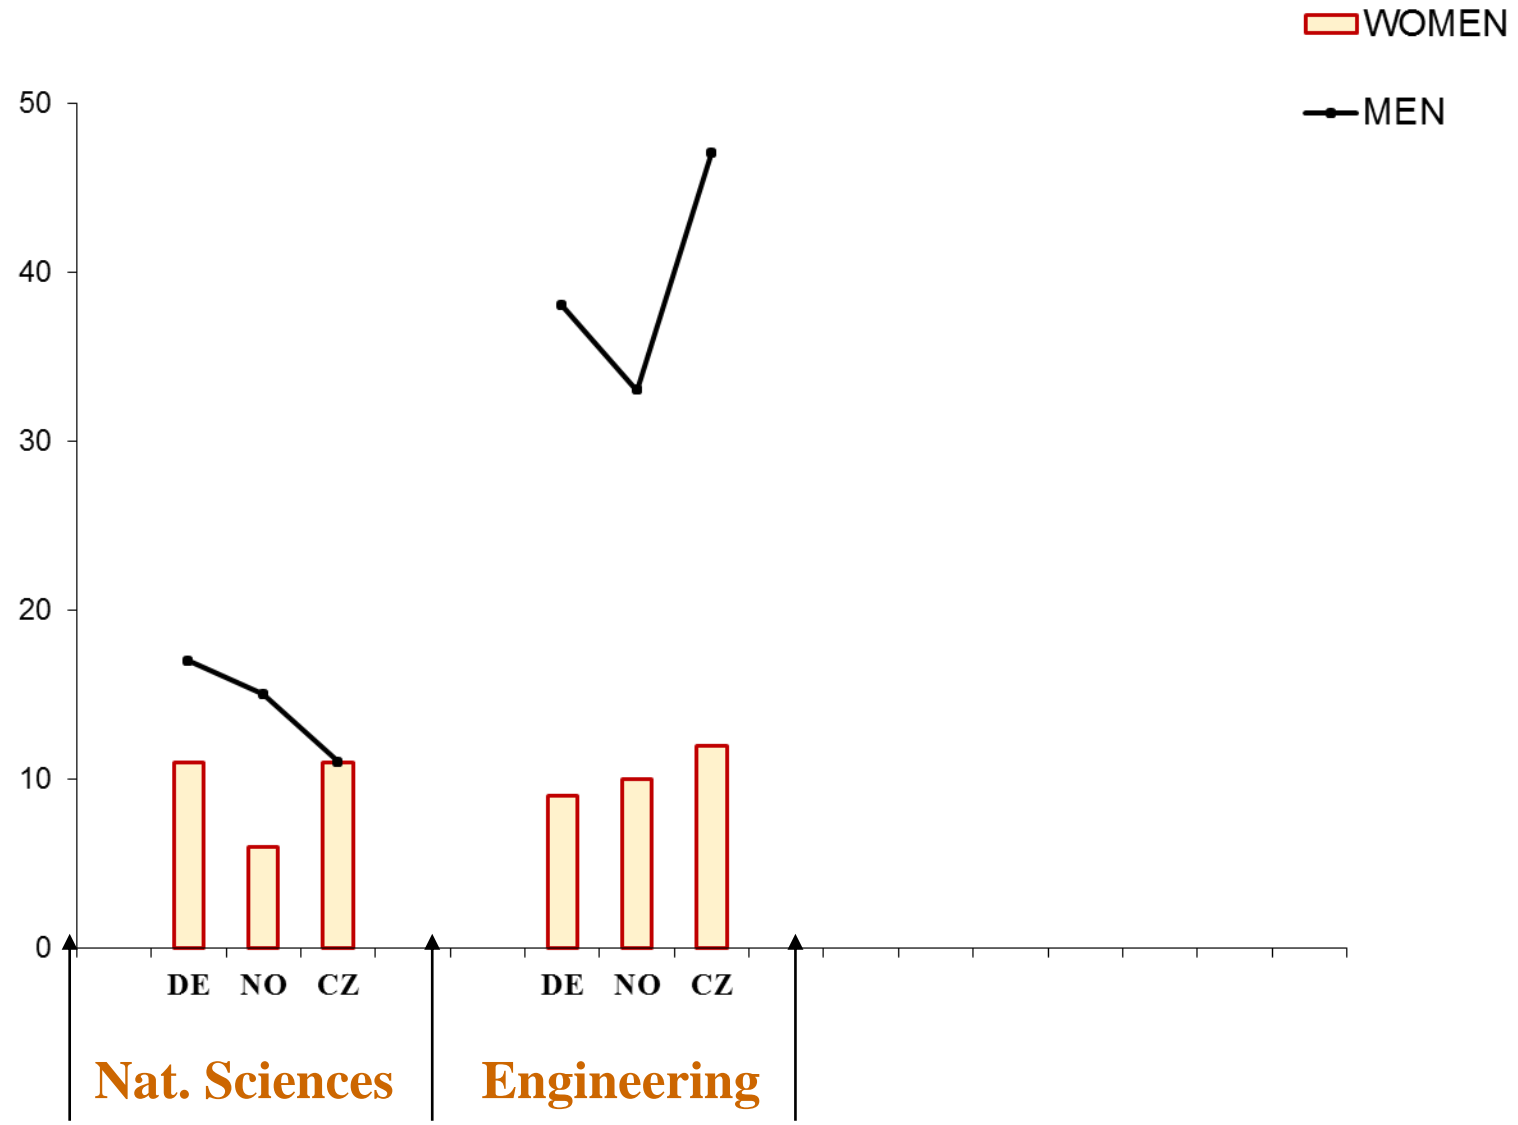

Business: ICT skills mismatch

Field of studies (Cheers)

Field of studies: share of graduates (Cheers)

Field of studies: Gender gap for acquired ICT skills (Cheers)

Conclusion

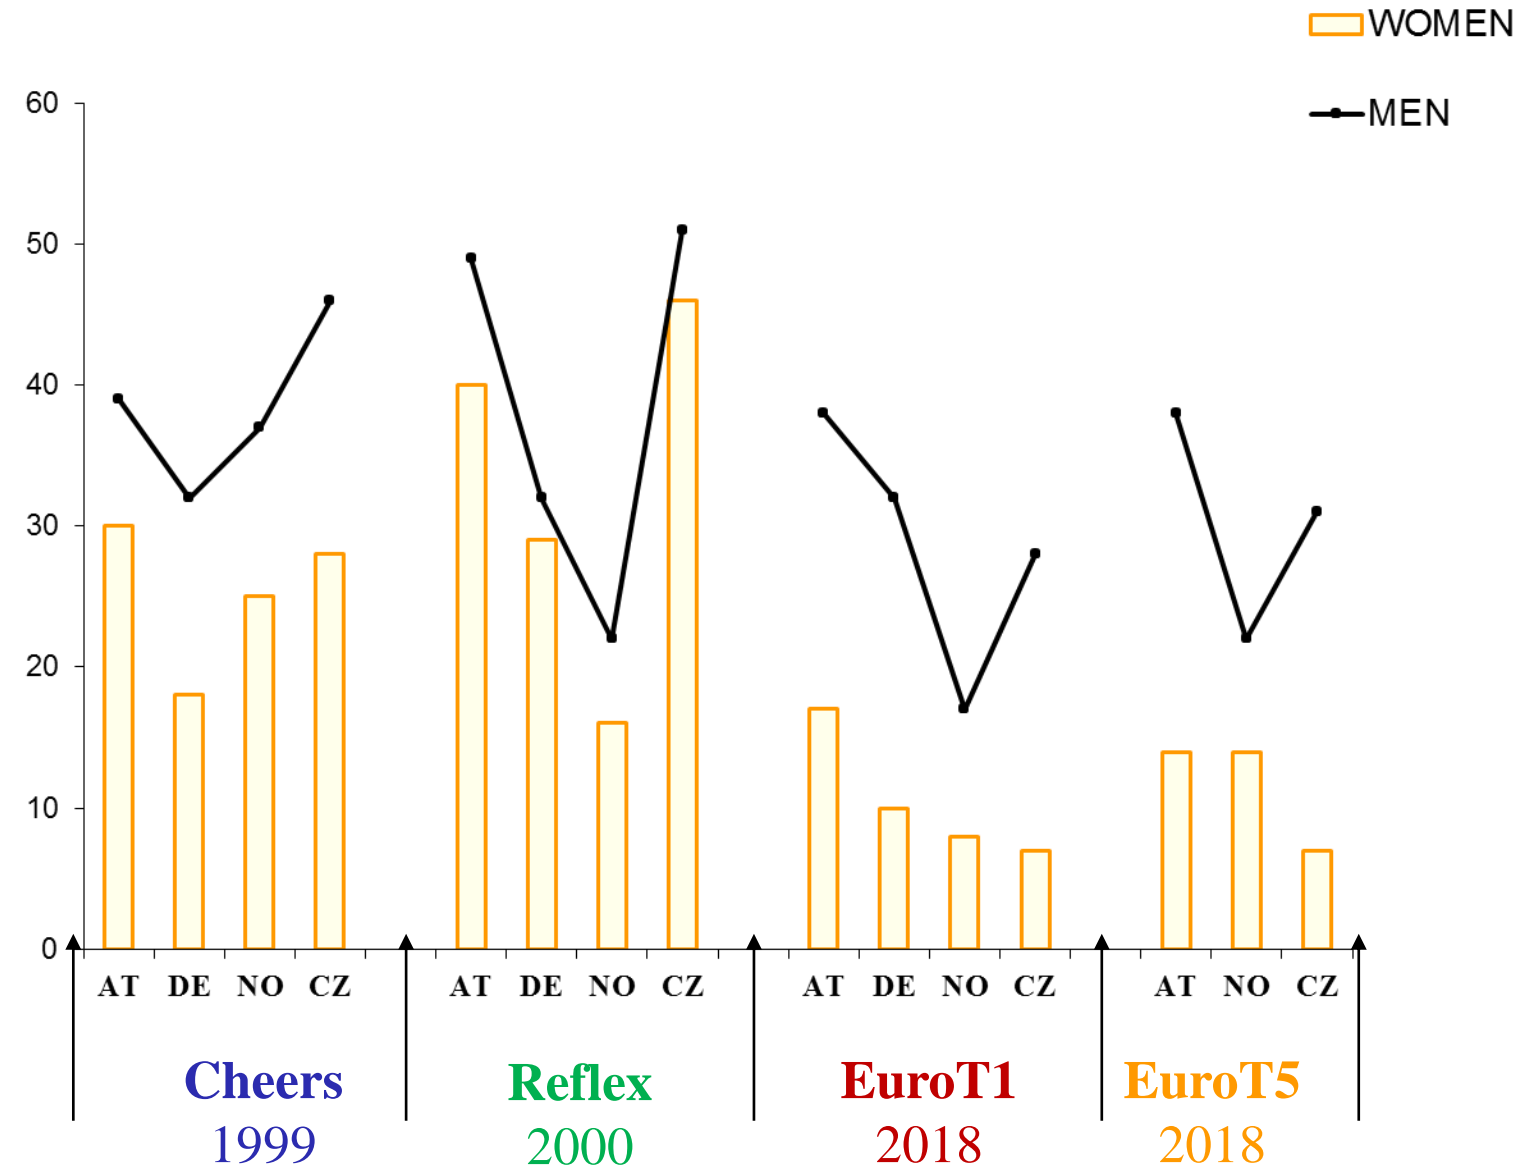

- Male graduates indicate higher levels of required ICT skills as well as higher skill mismatches
- However Female graduates can require more ICT skills in the Business sector than men and have more skill mismatches
- There are gender gaps in the level of acquired ICT skills even in STEM fields

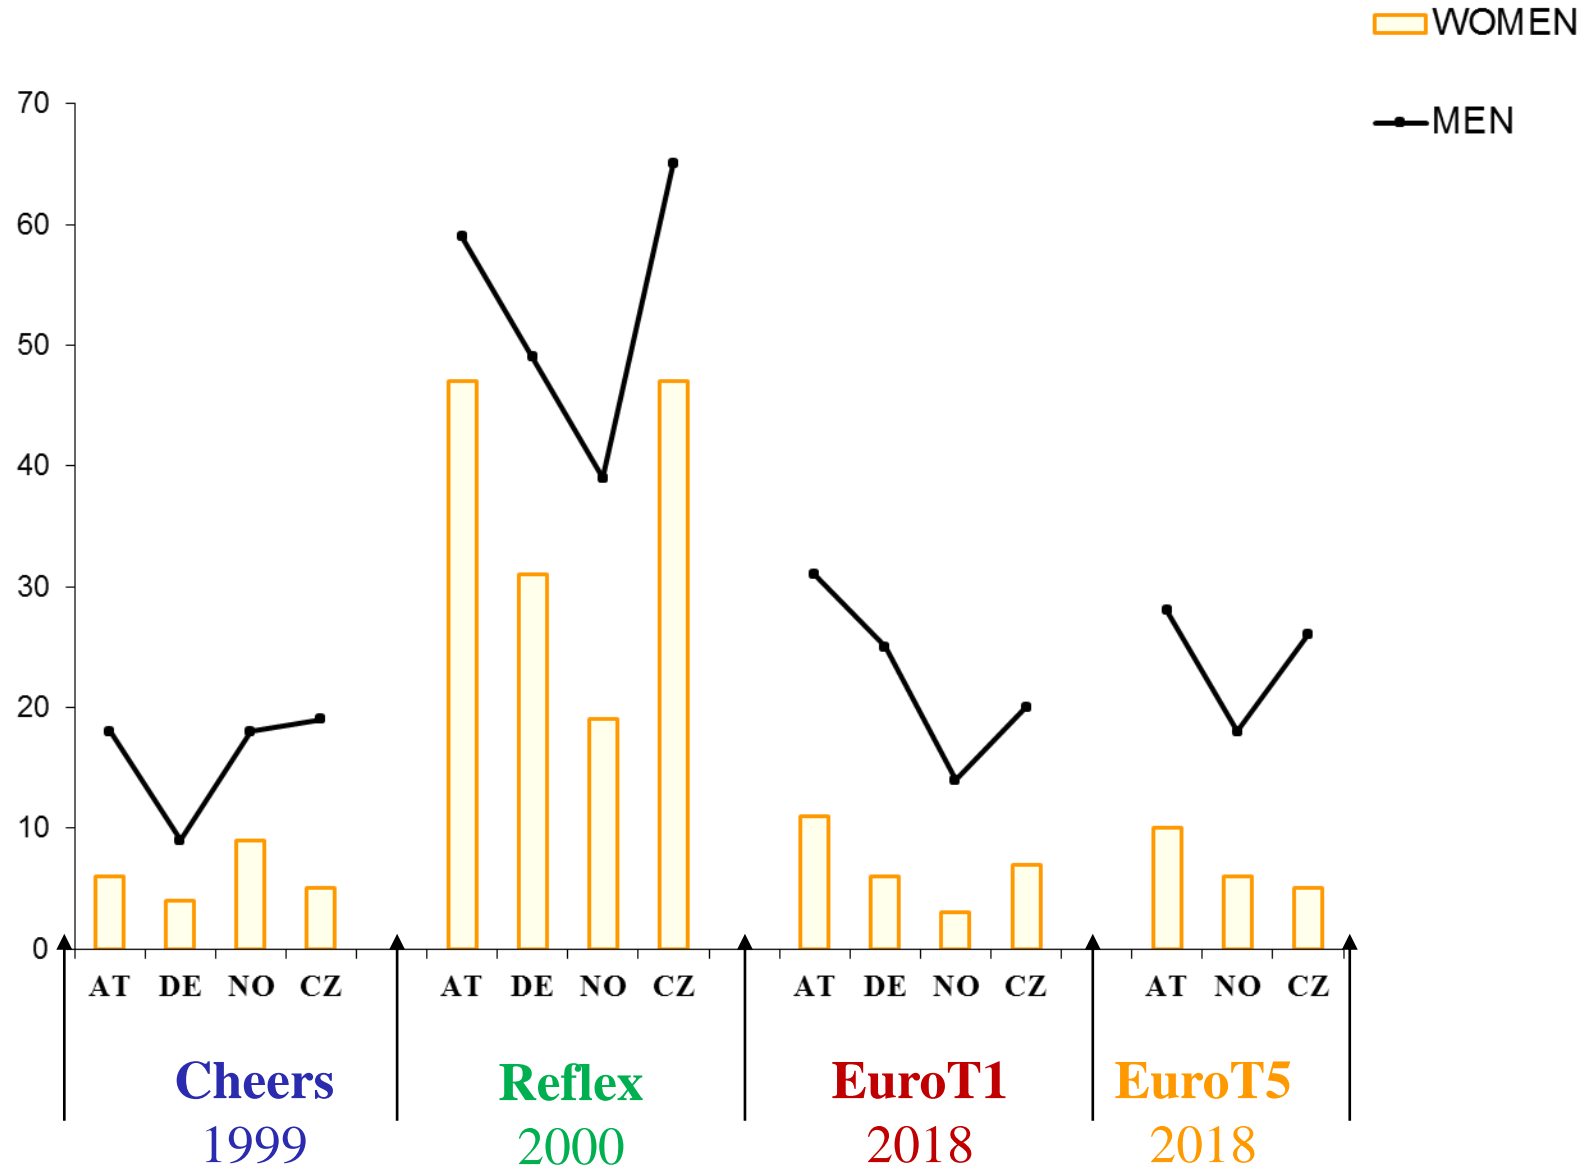

Analysis: Gender gap for acquired ICT skills

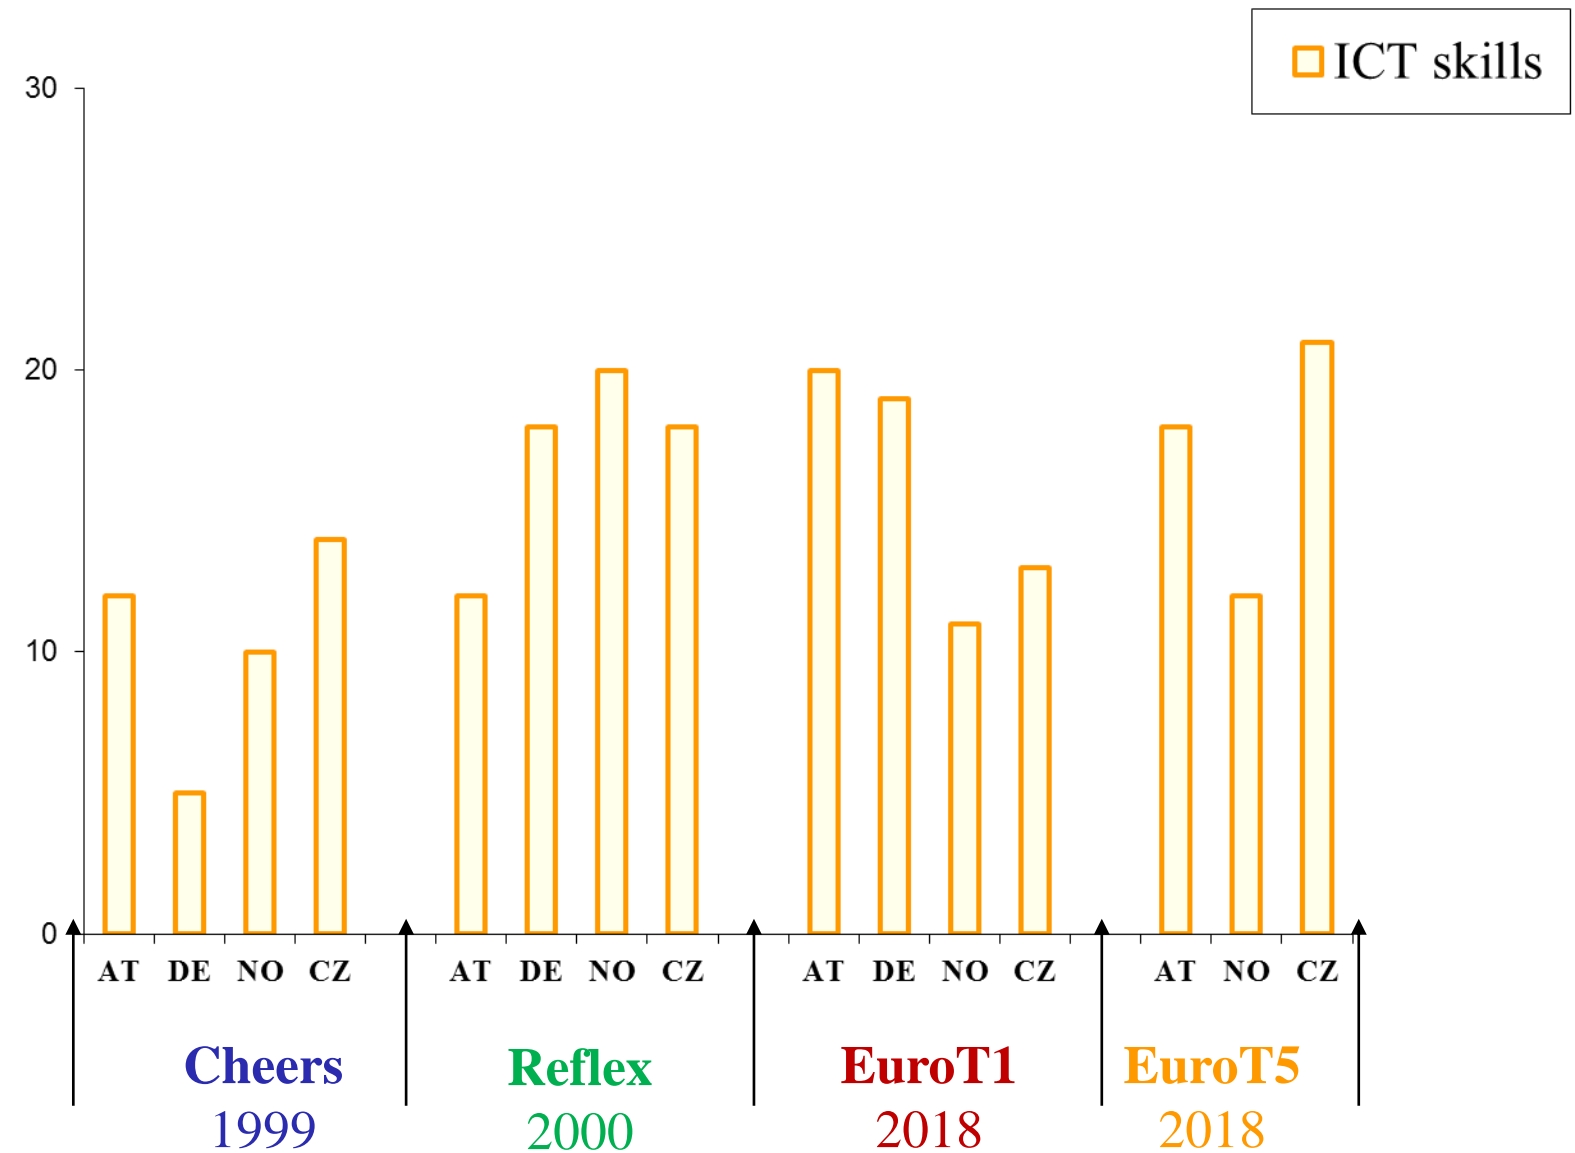

Professionals: required ICT skills

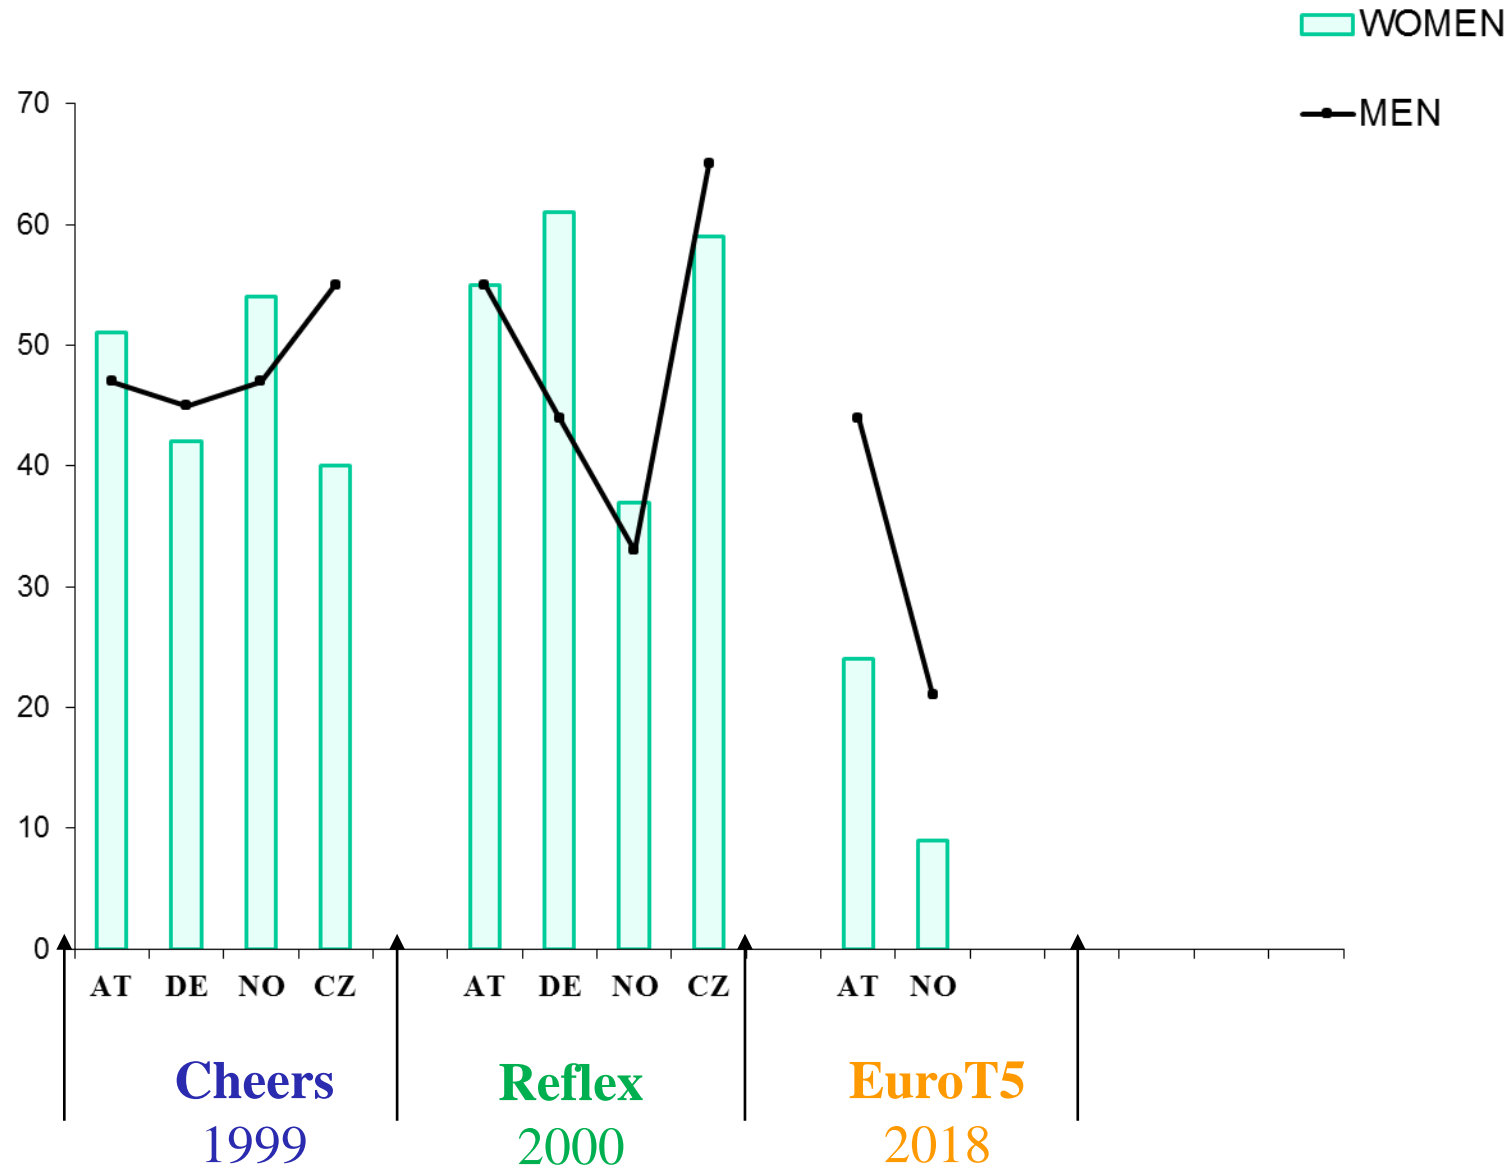

Professionals: acquired ICT skills

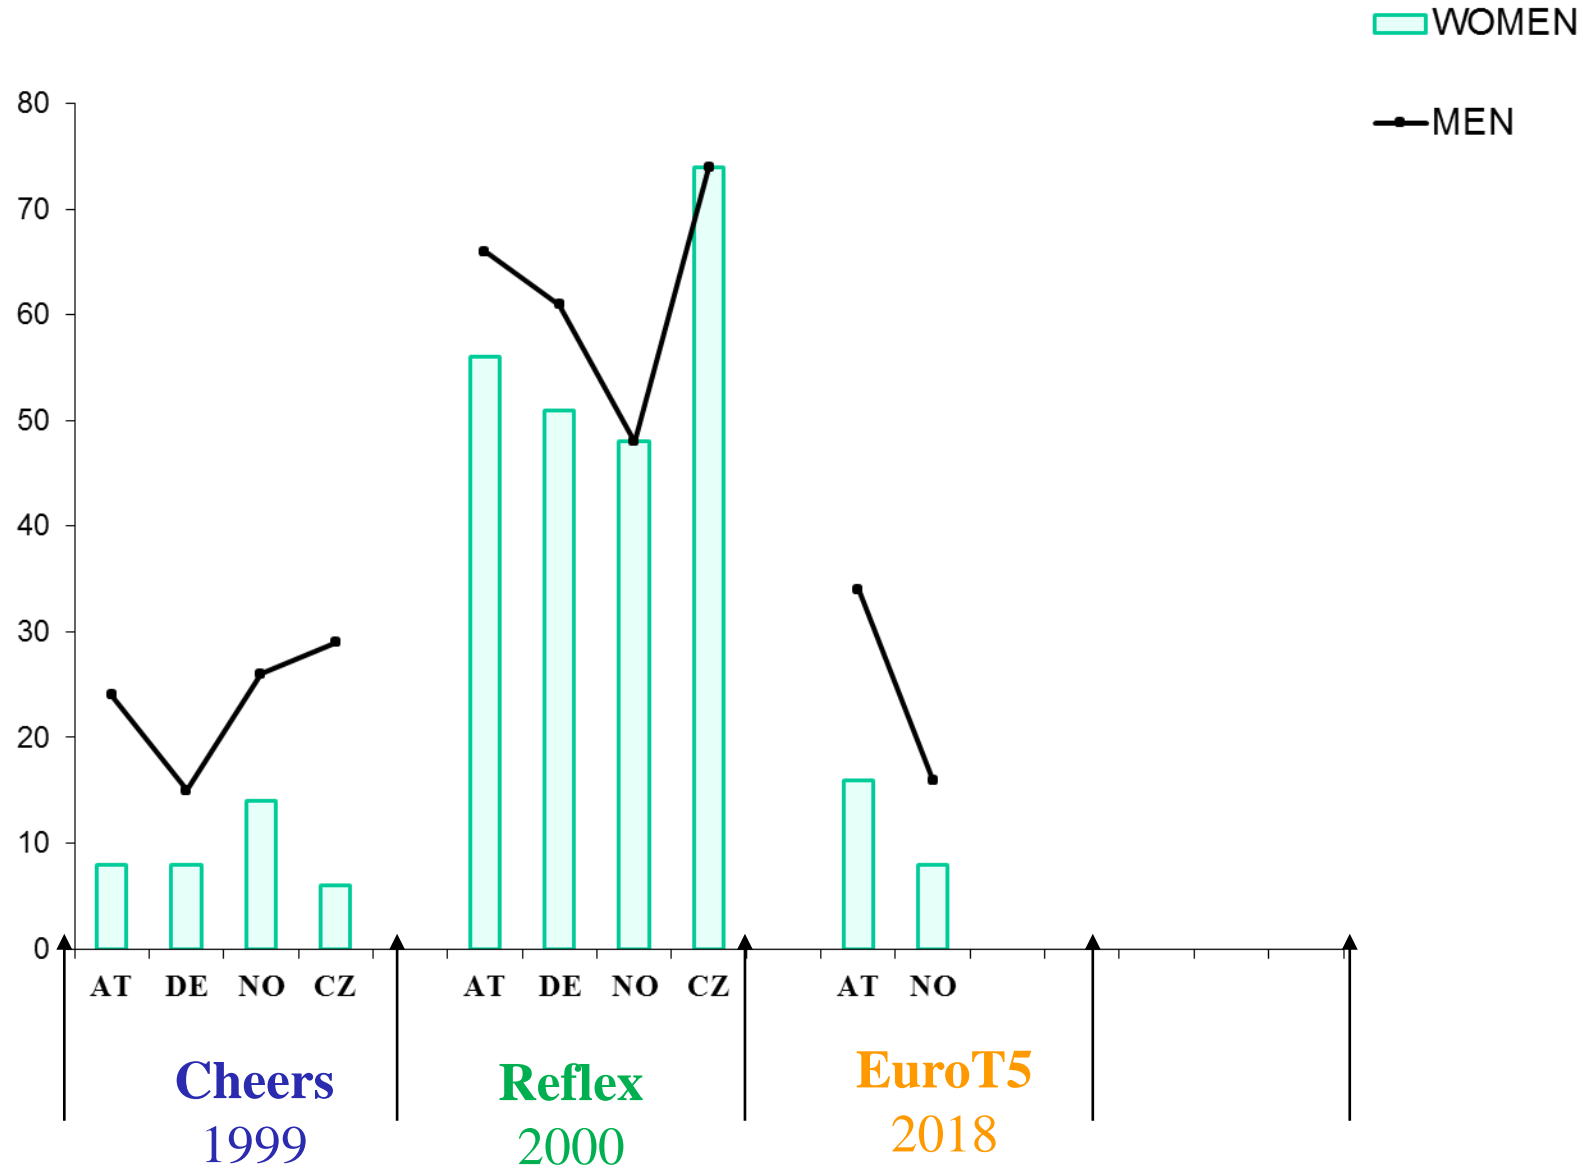

Professionals: Gender gap for acquired ICT skills

Business: required ICT skills

Business: acquired ICT skills

Business sector: Gender gap for acquired ICT skills

Field of studies: Gender gap for required ICT skills (Cheers)

Field of studies: required ICT skills (Cheers)

Field of studies: acquired ICT skills (Cheers)

Fields of studies: ICT skills mismatch (Cheers)
